Harsh Vardhan Chauhan

Forward Deployed Engineer. I build AI agents and get them working for real customers.

Kurukshetra, India vardhanharsh806@gmail.com

Experience

Forward Deployed Engineer, InboxKit (remote, Dubai) — Apr 2026 to present

- Primary technical contact for enterprise customers: troubleshoot complex product issues and drive resolution across support, engineering and product.
- Run and improve customer onboarding, implementation and operating procedures to raise adoption, reliability and time to value.
- Translate customer requirements into concrete fixes, feature improvements and technical solutions with product and engineering.

AI Research & Algorithm Intern, Arcflip (US startup, remote) — Dec 2025 to Feb 2026

- Designed and built the core scoring engine for an AI career-matching platform, combining multi-dimensional signals to rank best-fit candidates at scale.
- Engineered end-to-end Python pipelines that enforced data integrity and removed manual processing across agentic workflows.
- Designed a scalable schema for diverse career paths; calibrated outputs against reference profiles to improve accuracy and reduce scoring drift.

Projects

Agentic AI Research Assistant — Python, LangGraph, OpenAI API, Serper.dev, Streamlit

- Multi-agent deep research system in the spirit of Perplexity: planning, retrieval, analysis, reflection and synthesis agents in LangGraph with deterministic routing and controlled depth.
- Real-time web search through Serper.dev for retrieval-augmented generation and citation-backed reports.

Krishi Saahayak, crop disease detection — Python, TensorFlow, CNN, TensorRT, Flask

- Custom CNN trained from scratch at 91.44% accuracy, raised to 99.55% with an ensemble majority vote across 38 disease classes on real-world field images.
- Optimised with NVIDIA TensorRT and served as a real-time Flask REST API; published at ICICC-2026 (Springer).

TalentScout Hiring Assistant — Python, Zephyr-7B, Hugging Face, Streamlit

- LLM screening chatbot that generates role-specific technical questions from each candidate's declared stack.

RedditMind (in progress) — Next.js, Trigger.dev, Claude API, pgvector

- Agent that reads a user's subreddits overnight and writes a personalised morning briefing that improves with use.

Publications

- **Automated Identification of Crop Diseases Using Deep Learning Frameworks.** Co-authored. Accepted at ICICC-2026 (Springer).
- **Leveraging Digital Devices for Behavioral Health Assessment via ML.** Co-authored. Springer, 2025.

Education

B.Tech, Computer Science (Data Science), Bennett University — 2022 to 2026

CGPA 8.95. Deep Learning, Machine Learning, Information Retrieval, AI Systems.

Skills

Agentic AI & LLMs	LangGraph, GPT-4o, Claude, Zephyr-7B, Hugging Face Transformers, prompt engineering, RAG
ML & deep learning	TensorFlow, Keras, scikit-learn, XGBoost, LightGBM, CNNs, RNNs, LSTMs
Programming	Python, C++, SQL, JavaScript
Tools & infra	Flask, REST APIs, TensorRT, MySQL, Git, OpenAI API, Streamlit, React
